

GravityJoe®

GravityJoe® takes inspiration from the robotic and automation industry.

It's the first pneumatic balancer designed and patented to be installed on any aerial platform, allowing operators to work with agility and safety at height. This innovative machinery has been conceived with the aim of relieving the worker from supporting heavy tools for long periods, resetting their weight as a result.

This leads to a significant reduction in physical effort, safeguarding the worker's health and guaranteeing a tangible decrease of accident ratios. Last but not least, its use leads to a significant increase in terms of business productivity and professional performance.

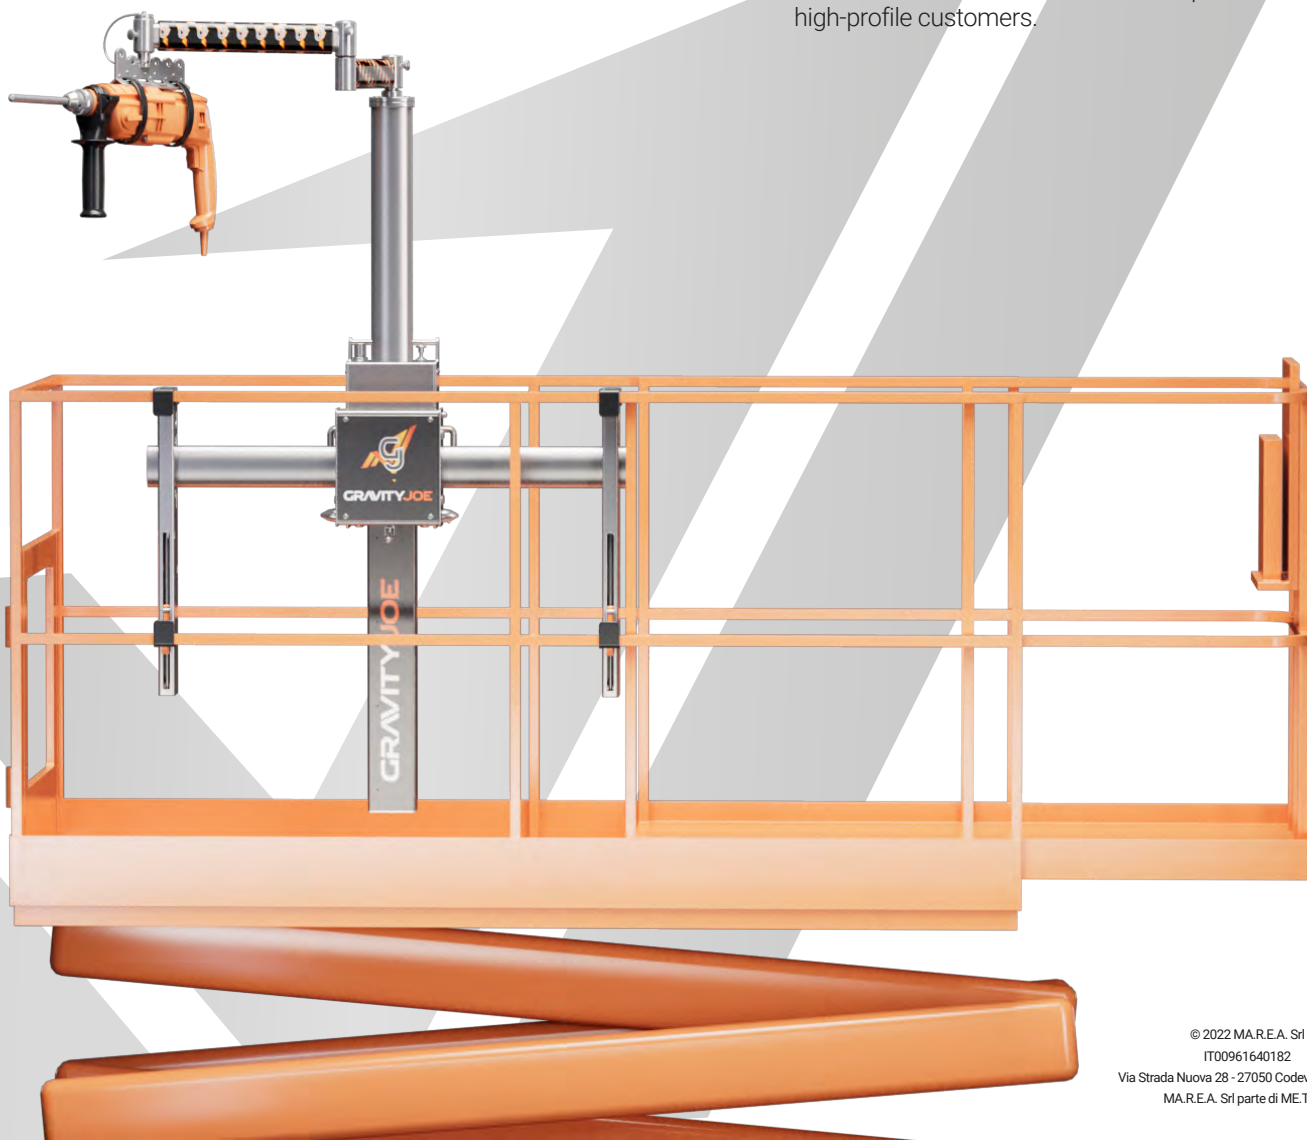

WHO WE ARE

Since 1977, Marea Srl deals repairs, maintenance and spare parts. Recently his attention has also focused on research and development of specific equipment such as GravityJoe®.

This led the company towards constant growth and significant international visibility. Always committed to customer needs and market dynamics, today Marea combines instinct and innovation with strong determination, pursuing the goal of achieving excellence in research and development of new technologies useful to the sector.

The result of this work leads to GravityJoe®, an innovative project 100% Made in Italy that stands out for reliability, safety and performance. Thanks to an expert engineering consultancy, the GravityJoe® design idea is the result of the combination of industrial experience, application study and intuition during the development phases; without neglecting the valuable contribution of our partners and high-profile customers.

WHAY CHOOSE GravityJoe

Increase productivity

GravityJoe® relieves the operator from carrying heavy tools for long periods, resetting their weight and increasing control. This entails a significant reduction in physical exertion, safeguarding workers, health with a consequent increase in company productivity and professional performance.

Risk reduction

GravityJoe® minimizes the most common causes of injuries related to the back and upper limbs, mainly caused by long and repetitive tasks.

Main application fields:

- Industrial fittings
- Construction
- Industry
- Shipyards
- Carpentry
- Green maintenance
- Logistic
- Automotive
- Mining

Applications avdantages:

- Zero physical effort by increasing operator performance
- For the rental industry, it's an innovative solution and an added value combined with the traditional rental of aerial platforms
- Considered must-have by construction and maintenance operators
- Simple and intuitive operation and control
- Requires minimal training
- Versatile for a variety of applications
- Low maintenance costs

MADE IN
ITALY

QUICK AND SECURE CONNECTION

For application on aerial platforms and special trolley

GJ Trolley allows you to operate safely and with ample freedom of movement from the ground up to a height of 2.12 m. An indispensable solution that supports the manipulator mobile industrial, moving it from the ground and allowing agile operations and total operator support, relieving the operator from the load of heavy instrumentation, for an extended time.

Compact and highly versatile, it is perfectly suited to the most diverse industrial sectors.
